

A1049-21

North Dakota Barley, Oat and Rye

Variety Trial Results for 2021 and Selection Guide

Clair Keene, Rich Horsley, Mike McMullen, Paul Schwarz, Andrew Friskop and Thomas Baldwin (NDSU Main Station); Blaine Schatz, Steve Zwinger and Mike Ostlie (Carrington Research Extension Center); Glenn Martin (Dickinson Research Extension Center); John Rickertsen (Hettinger Research Extension Center); Eric Eriksmoen (North Central Research Extension Center, Minot); Bryan Hanson (Langdon Research Extension Center); and Gautam Pradhan (Williston Research Extension Center)

Barley, oat and rye varieties currently grown in North Dakota are described in the following tables. Successful production of these crops depends on numerous factors, including selecting the right variety for a particular area. Characteristics to evaluate in selecting a variety are: yield potential in your area, test weight, straw strength, plant height, reaction to problematic diseases and maturity.

Selecting varieties with good quality also is important to maintain market recognition. Because malting barley usually is purchased on an identity-preserved basis, producers are encouraged to determine which barley varieties are being purchased by potential barley buyers before selecting a variety. When selecting a high-yielding and good-quality variety, use data that summarize several years and locations. Additional data from county sites are available at <https://vt.ag.ndsu.edu> and from each Research Extension Center.

Yield is reported on a 14.5%, 14% and 14% moisture basis for barley, oats and rye respectively. Protein is reported on a 0% moisture basis for all crops in this report. The agronomic data presented in this publication are from replicated research plots using experimental designs that enable the use of statistical analysis. The LSD (least significant difference) numbers beneath the columns in tables are derived from these statistical analyses and apply only to the numbers in the column in which they appear. Differences between two varieties exceeding the LSD value mean that with 95% or 90% confidence (LSD probability 0.05 or 0.10), the higher-yielding variety has a significant yield advantage.

The abbreviation NS is used to indicate that no statistical difference occurs between varieties. The CV is a measure of variability in the trial. The CV stands for coefficient of variation and is expressed as a percentage. Large CVs mean a large amount of variation could not be attributed to differences in the varieties.

Presentation of data for the entries tested does not imply approval or endorsement by the authors or agencies conducting the test. North Dakota State University approves the reproduction of any table in this publication only if no portion is deleted, appropriate footnotes are given and the order of the data is not rearranged.

Bolded varieties were tested for the first time this year, so some ratings may change as new data become available.

¹M = malting; F = feed.

²BARI = Busch Agricultural Resources Inc.; CDC = Crop Development Centre, University of Saskatchewan; ND = North Dakota State University
Ackermann = Saatzucht Ackermann, Germany.

³R = rough; S = smooth.

⁴L = long S = short.

⁵Straw Strength scores from 1-9, with 1 = strongest and 9 = weakest.

⁶Disease reaction scores from 1-9, with 1 = resistant and 9 = very susceptible, NA – not available.

⁷Lower DON accumulations than other varieties tested.

¹Hull-less varieties. When comparing yield of hull-less oat varieties with varieties with hulls, multiply the yield of the hull-less oats by 1.35 (the hull of a hulled kernel comprises 35% of the weight).

¹Two-year Average includes 2019 and 2020.

²Excludes Dickinson and Minot data due to high variability caused by drought conditions.

³Hull-less varieties. When comparing yield of hull-less oat varieties with varieties with hulls, multiply the yield of the hull-less oats by 1.35 (the hull of a hulled kernel is 35% of the weight).

¹ND = North Dakota State University; WI = University of Wisconsin; MN = University of Minnesota; MI = Michigan State University.

KWS = KWS Cereals, USA

²NA = not available.

³Hybrid.

⁴Varieties with fair or poor winter hardiness should not be seeded in bare soil.
