Bell peppers come in different colors such as green, yellow, orange, red and even purple. Most bell peppers start out green, then mature and ripen the longer they stay on the vine. As bell peppers change in color, they also increase in sweetness and nutritional value.

Growing

Bell peppers tend to grow best in warmer temperatures. The ideal temperature range for best growth is between 62 and 80 F.

Bell peppers grow best when started from seeds indoors in late winter, followed by planting outside in late spring. Sow seeds indoors eight to 10 weeks before the date of your last spring frost.

Set plants 18 to 24 inches apart in a row, or 14 to 18 inches apart in all directions. Set plants no deeper in the soil than they were previously in the pots to avoid rotting.

Bell peppers thrive in fertile and moist soil, so keep the soil moist while the plants are in bloom and producing peppers. About 1 to 1½ inches of water per week is sufficient.

Harvesting

Harvest promptly when fruits reach the desired size and color. You should cut the pepper off the vine with scissors or a knife as opposed to ripping it off. This prevents any further damage to the plant or other peppers that are growing.

Nutrition

One medium-sized bell pepper has about 25 calories, 0 g fat, 6 g carbohydrate, 1 g protein, 2 g fiber, 12 mg calcium, 207 mg potassium, 4 mg sodium and 120 mg vitamin C. It also contains vitamins K, E, A and B6 and folate.

Storing

Keep bell peppers in the refrigerator, and for optimal freshness, use within a week. If bell peppers have been cut, keep them refrigerated and store in an airtight container or plastic wrap.

Preparing

After harvesting bell peppers, rinse them with water. Cut around the core and discard that section. Bell peppers can be eaten fresh, steamed, grilled, roasted or stuffed.

Freezing: Bell peppers are easy to freeze. Begin by rinsing and drying peppers thoroughly to help prevent freezer burn. Cut peppers as desired, removing all seeds. Spread the pepper slices on a baking sheet in a single layer and freeze them. This will prevent the peppers from freezing together in clumps. Transfer the frozen peppers to freezer bags. Use heavy-duty freezer bags and eliminate as much air as possible from the bags to help prevent any freezer burn.
